

INSTRUCTIONS

REVERSE ADAPTER FOR FUJICA ST CAMERAS

In taking magnified close-ups, best results are obtained by mounting the lens in reverse. This Reverse Adapter is used in combination with Extension Tubes and Extension Bellows for taking larger-than-life-size pictures of your subject with the FUJICA ST CAMERAS.

■ How to Mount

This Reverse Adapter consists of two pieces, R1 and R2. One end of R1 is screwed into the front of the lens like a filter and the other end is screwed into the Extension Tube or Extension Bellows. R2 is then screwed on to the rear end of the lens (now facing the front). It couples with the lens aperture control pin for adjusting the aperture manually.
